
Summer Employment - Software Engineer/Developer

Proconex specializes in the development of foreign device communication interfaces and control system emulation for industrial applications and operator training systems (OTS). A small company located in Kirkland Quebec, on the West Island of Montreal, Proconex has been developing hardware and software solutions for the process control industry for more than 30 years.

Position

The employee will work as part of the development team to design, develop, and support current and new applications for control system communication interfaces. Specific module development related to product enhancements is the primary responsibility for this position.

Requirements

- Excellent knowledge of C++ with some experience in software development
- Experience working with Microsoft Visual Studio
- Experience working with Windows-based PC hardware/software
- Familiarity with Ethernet-based communication (TCP/UDP)
- English proficiency, both spoken and written

Additional Assets

- Experience with process control and DCS systems
- Knowledge of OPC (OLE for Process Control)

We offer competitive salaries and flexible hours while working within a small-business environment. Interested candidates may submit an application (CV, transcript, and references) via email to info@proconex.com, or by mail to
